

KHUSHI BHAVIN LAKHLANI

Boston, MA | (617) 212-2191 | lakhlani.k@northeastern.edu | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

SUMMARY

Proficient in SQL, Python, and dashboard tools (Power BI, Excel) with a track record of translating complex datasets into growth-driving insights. Thrives in fast-paced, cross-functional startup environments and passionate about optimizing user experiences through data-driven decision-making.

EDUCATION

Northeastern University, Boston, MA	Expected Sep 2027
Master of Science in Information Systems	
Relevant Courses: Data Science Engineering with Python, Data Management and Database Design	
Coventry University, Coventry, United Kingdom	July 2024
Bachelor of Science in Computer Science	GPA: 3.74

SKILLS

Programming Languages: SQL, Python (Pandas, NumPy, Scikit-learn), R, C++
Visualization and Tools: Power BI, Tableau, Matplotlib, Excel (PowerQuery, Pivot Tables, Advanced Formulas), PowerPoint
Statistical Methods and Machine Learning: Predictive Modeling, Statistical Distributions, Hypothesis Testing, Data Validation, Feature Engineering, Machine Learning Algorithms
Tools & Platforms: Jupyter Notebook, Git/GitHub, Cursor (AI-native IDE), MS Office Suite, Cloud Computing Platforms
Certifications: Intel Solutions Pro – AI Fundamentals, Intel Cloud Computing (Foundational and Technical)

EXPERIENCE

Data Analyst Intern Ernst & Young (EY) Mumbai, India	Jan 2025 – Apr 2025
- Built end-to-end data pipelines (Python, SQL, Power BI) to analyze user engagement and performance patterns across 44K+ enterprise records, delivering predictive insights that eliminated 10+ hours/week of manual reporting - Developed data validation and preprocessing pipelines across production datasets, applying statistical methods to identify and resolve 35% of recurring data quality issues and improve model-ready data integrity - Translated ambiguous business problems into technical solutions across nine production stages, collaborating with cross-functional teams to deliver data-driven insights that drove 18% operational efficiency improvement - Designed interactive KPI-tracking dashboards and reports in Power BI to surface actionable insights from large datasets, presenting findings to diverse stakeholders to support evidence-based decision-making - Built automated data processing pipelines (Python, Excel PowerQuery) to streamline analysis workflows, enabling rapid experimentation and reducing manual data wrangling across multiple business units	
Sales Analytics Intern Intel Corporation Swindon, United Kingdom	Jul 2022 – Sep 2023
- Developed predictive models on 12+ months of partner engagement and behavioral data, delivering reports and trend analysis that identified growth opportunities and directly informed quarterly business strategy across EMEA - Communicated analytical results to a variety of stakeholders through presentations and written reports, translating complex data into actionable insights for campaign optimization and business strategy that drove \$3.2M in business value - Worked with large-scale Salesforce and e-commerce datasets (Python, SQL), applying feature engineering and statistical modeling to identify \$2M in new business opportunities across EMEA - Collaborated with 50+ cross-functional team members across EMEA on R&D and knowledge-sharing initiatives, demonstrating excellent team communication and problem-solving skills in a fast-paced environment	

PROJECTS

Performance Analytics Pipeline with Statistical Modelling GitHub
Built Python-based ML pipeline processing 44K+ time-series records, applying predictive modeling and statistical techniques to detect performance patterns with 97% accuracy across 9 stages
AuditLens — ML-Powered Financial Fraud Detection GitHub
Built end-to-end anomaly detection system analyzing large-scale financial datasets across 500+ companies, applying ML algorithms and feature engineering on 5,000+ company-year records to identify patterns and flag data anomalies
PitWallAI – F1 Driver Performance Intelligence GitHub
Built an AI-powered analytics platform using a full RAG pipeline (LangChain, ChromaDB, Groq LLM) to answer natural language queries across 10,500+ race records and 25 seasons of F1 data, featuring a driver stats dashboard, head-to-head comparisons, and an all-time leaderboard (React, FastAPI, Python)

ACHIEVEMENTS

Predictive AI Board Decision Lens Human Edge Studio Hackathon, 1st Place
Built and evaluated a predictive loan default model on 35K-customer dataset, applying ML algorithms and hypothesis testing to benchmark performance (AUC 0.82, 85% recall), then presented strategic findings and risk analysis to a simulated Board Risk Committee
